Listing Claims

1. (currently amended) A coating composition comprising a binder consisting essentially of:

- a. polyisocyanate crosslinking agent;
- b. 1 to 50% by weight, based on the weight of the binder, of a urethane oligomer consisting essentially of the reaction product of the isocyanurate of hexane diisocyanate with cyclohexanol and dimethylol propionic acid;
and

— wherein X is an aliphatic or cycloaliphatic group, R¹ and R² are the same or different organic groups that are inert to isocyanate groups, and n is 2 to 4, and

- c. optionally, a polymeric component having a number average molecular weight of 5,000 to 50,000 and having reactive groups that crosslink with an isocyanate, where the reactive groups are selected from the group consisting of hydroxyl, carboxyl, glycidyl, amine and any mixtures thereof; and
- d. optionally, an oligomeric component having a number average molecular weight of 300 to 3,000 having reactive groups that crosslink with an isocyanate, where the reactive groups are hydroxyl, carboxyl, glycidyl, amine, aldimines, phosphoric acid, ketimine and any mixtures thereof; and
- e. additives consisting of:
 - (1) a hydroperoxide decomposer,

Application No.: 10/737338
Docket No.: FA1084USNA

Page 3

- (2) an ultraviolet light absorber, and
 - (3) a hindered amine light stabilizer.
2. (canceled)
3. (canceled)
4. (canceled)
5. (Original) The coating composition of claim 1 wherein the binder contains 1 to 50% by weight, based on the weight of the binder, of an acrylic polymer having a number average molecular weight of 5,000 to 50,000 and having groups reactive with isocyanate.
6. (Previously Presented) The coating composition of claim 5 wherein the acrylic polymer consists essentially of polymerized monomers selected from the group consisting of linear alkyl (meth)acrylates having 1 to 12 carbon atoms in the alkyl group, alkyl (meth)acrylates having 1 to 12 carbon atoms in the alkyl group, cyclic or branched alkyl (meth)acrylates having 3 to 12 carbon atoms in the alkyl group, isobornyl (meth)acrylate, styrene, alpha methyl styrene, (meth)acrylonitrile, (meth)acryl amides, and polymerized monomers that provide groups reactive with isocyanate selected from the group consisting of hydroxy alkyl (meth)acrylates, glycidyl (meth)acrylates, amino alkyl(meth)acrylates and (meth)acrylic acid.
7. (Original) The coating composition of claim 6 wherein the acrylic polymer has a hydroxyl equivalent weight of 300 to 1300 and consists essentially of polymerized monomers selected from the group consisting of alkyl (meth)acrylates having 1 to 12 carbon atoms in the alkyl group, cyclic or branched alkyl (meth)acrylates having 3 to 12 carbon atoms in the alkyl group, isobornyl methacrylate, styrene, alpha methyl styrene, (meth)acrylonitrile, (meth)acryl amides, and polymerized monomers consisting of hydroxy alkyl (meth)acrylates having 1 to 4 carbon atoms in the alkyl group.
8. (Original) The coating composition of claim 7 wherein the acrylic polymer consists essentially of styrene, ethylhexyl methacrylate, isobornyl methacrylate and hydroxyethyl methacrylate.
9. (Original) The coating composition of claim 1 wherein the binder contains 1 to 50% by weight, based on the weight of the binder, of an acrylic oligomer having a number average molecular weight of 300 to 3,000 and having groups reactive with isocyanate

Application No.: 10/737338
Docket No.: FA1084USNA

selected from the group consisting of hydroxy, carboxyl, glycidyl, amine, aldimines, phosphoric acid, ketimine and any mixtures thereof.

10. (Previously Presented) The coating composition of claim 9 wherein the oligomer consists essentially of polymerized monomers selected from the group consisting of linear alkyl (meth)acrylates having 1 to 12 carbon atoms in the alkyl group, alkyl (meth)acrylates having 1 to 12 carbon atoms in the alkyl group, cyclic or branched alkyl (meth)acrylates having 3 to 12 carbon atoms in the alkyl group, isobornyl (meth)acrylate, styrene, alpha methyl styrene, (meth)acrylonitrile, (meth)acryl amides, and polymerized monomers that provide groups reactive with isocyanate selected from the group consisting of hydroxy alkyl (meth)acrylates, glycidyl (meth)acrylates, amino alkyl(meth)acrylates and (meth)acrylic acid.

11. (Original) The coating composition of claim 1 wherein the polyisocyanate is selected from the group consisting of aliphatic polyisocyanates, cycloaliphatic polyisocyanates, aromatic polyisocyanates and isocyanate adducts.

12. (Original) The coating composition of claim 1 in which the polyisocyanate is selected from the group consisting of isophorone diisocyanate, hexamethylene diisocyanate, and trimer of hexamethylene diisocyanate.

13. (Original) The coating composition of claim 1 wherein the binder contains 1 to 50% by weight, based on the weight of the binder, of a polyester having hydroxyl groups.

14. (canceled)

15. (canceled)

16. (Original) The coating composition of claim 1 which contains about 0.1% to 5% by weight, based on the weight of the binder, of an ultraviolet light absorber.

17. (Canceled)

18. (Original) The coating composition of claim 1 which contains about 0.1% to 5% by weight, based on the weight of the binder, of a hydroperoxide decomposer.

19. (Original) The coating composition of claim 1 which contains about 0.1% to 5% by weight, based on the weight of the binder, of a hindered amine light stabilizer.

20. (Original) A substrate coated with the composition of claim 1.

Application No.: 10/737338
Docket No.: FA1084USNA

Page 5

21. (Previously Presented) A substrate having a base coating of a pigmented coating of the composition of claim 1, which is top coated with a clear coating of the composition of claim 1.

22. (Previously Presented) A substrate having a multi-layer coating comprising a pigmented primer coating of the composition of claim 1, a base coating of a pigmented coating of the composition of claim 1, and a top-coating of a clear coating of the composition of claim 1.

23. (Previously Presented) A process for coating an auto body or auto part which comprises

applying a base coating of a pigmented coating of the composition of claim 1 to a substrate;

applying a top-coating of a clear coating of the composition of claim 1 over the base coating and

curing the base coating and top-coating to form a base coat/ clear coat finish on the substrate.

24. (Original) An auto body or auto part coated with the composition of claim 1.

25. (currently amended) A two component coating composition comprising

Component A comprising a polyisocyanate crosslinking agent; and

Component B comprising 1 to 50% by weight, based on the weight of the binder, of a urethane oligomer consisting essentially of the reaction product of the isocyanurate of hexane diisocyanate with cyclohexanol and dimethylol propionic acid an-isocyanate-reactive component having at least one compound having the following formula:

Application No.: 10/737338
Docket No.: FA1084USNA

Page 6

~~wherein X is an aliphatic or cycloaliphatic group, R¹ and R² are the same or different organic groups that are inert to isocyanate groups, and n is 2 to 4, and~~

optionally, a polymeric component having a number average molecular weight of 5,000 to 50,000 and having reactive groups that crosslink with an isocyanate, where the reactive groups are hydroxyl, glycidyl amine and any mixtures thereof; and

optionally, an oligomeric component having a number average molecular weight of 300 to 3,000 having reactive groups that crosslink with an isocyanate, where the reactive groups are hydroxyl, carboxyl, glycidyl, amine, aldimines, phosphoric acid, ketimine and any mixtures thereof; and

the following additives consisting of:

a hydroperoxide decomposer, an ultraviolet light absorber, and a hindered amine light stabilizer;

wherein Components A and B are thoroughly mixed together before application to a substrate.

26. (currently amended) The coating composition of claim [[14]] 1 wherein the urethane oligomer also includes an amine.
